

PUEBLOS TO SKYSCRAPERS

North America

Ambitious ideas, expansive spaces, and a strong appreciation of regional identity have underpinned some of North America’s most remarkable structures. The Pueblo architecture of the 1st century CE was revived and reinterpreted in the 20th century as the Santa Fe style. Meanwhile, in the Deep South, the ancient construction of huge platform mounds was still being practiced when Europeans arrived in the 17th century. The colonizers evolved a distinctive American style, supported by Classical ideals and concepts of freedom and democracy. Reflecting the vastness of the continent and the potential to dream large, man-made structures were supersized, an approach that continued through the Industrial Revolution and into the era of skyscrapers.

- 28 Vietnam Veterans Memorial
- 29 CN Tower
- 30 Walt Disney Concert Hall
- 31 National Museum of African American History and Culture

COLONIZATION LEAVES ITS MARK

What remains of indigenous American structures consists largely of prehistoric effigy mounds in the east and Pueblo architecture, made of adobe, in the southwest. Colonization of the eastern and western coasts from the 17th to 19th centuries introduced different European styles in more durable materials.

when it was built in 1937, the Golden Gate Bridge was the tallest and longest suspension bridge in the world

PUEBLO BUILDERS

700-1200 CE

Native American people living in the southwest of what is now the US developed a tradition of building stone and adobe pueblos. Using limestone blocks and bricks, made from clay and water, they designed villages with tiered, multistory terraces, with each floor set back slightly from the one below.

1 CHACO CANYON

EFFIGY MOUNDS

800 BCE-1500 CE

Massive earth mounds were built by various indigenous tribes on sites of significance. These mounds were used both as sub-structural platforms for buildings and as burial sites. Some mound sites were expanded over decades or even centuries, with new levels added and layers applied to prevent slumping.
