

CONTEMPORARY ARCHITECTURE

1945-PRESENT

The booming postwar economy, a renewed sense of purpose, and new technologies fueled alternative approaches to design within Modernism and then, from the 1960s, Post-Modernism followed by Contemporary architecture. Corporate America expressed its ambition in the form of steel-framed glass towers that reached higher than ever before.

WASHINGTON, D.C.

spread across an area of 175,000 square ft (16,260 square m), Biltmore House is the largest privately owned house in the US

NEO-CLASSICISM BIRTHS A CAPITOL

c.1775-1850

The spirit of what was the Age of Revolution infused the Neo-Classical architecture of the "new" United States of America. Thomas Jefferson, who drafted the Declaration of Independence, set the agenda for the nation's federal building program with his outspoken support for ancient Greek and Roman architectural styles, which he believed symbolized democracy.

6 THE US CAPITOL

THE INDUSTRIAL AGE

c.1800-1914

As industrialization swept across the continent, mass-production of steel transformed construction. Major engineering projects unfolded, the railways expanded, and a raft of new architectural wonders emerged. Steel cables became the catalyst for suspension bridges, and steel girders were the backbone of skyscrapers.

MODERNIST CONCRETE DESIGNS

c.1910-40

With eminent Modernist architects emigrating to the US, concrete became the material from which several wonders emerged in North America. In 1928, a patent for prestressed, steel-reinforced concrete gave birth to a construction technology with seemingly limitless possibilities.
