

BUILDING SUSTAINABLY
1960s-PRESENT

Increasing vulnerability to climate change has driven efforts by city planners to commission sustainable architecture. Intelligent buildings that are self-powered have become modern wonders, with features such as recycled water facilities, rooftop gardens, and green walls.

INDIA MEETS ISLAM
16TH-18TH CENTURY

The Mughal empire developed an architectural style fusing Indian and Persian Islamic traditions. Characterized by their monumental scale, Mughal structures were emphasized by strict symmetry, towering minarets, massive domes, detailed ornamentation, and the dramatic application of red sandstone and white marble.

39 TAJ MAHAL

built in the 8th and 9th centuries, Borobudur Temple in Java, Indonesia, is the largest Buddhist monument in the world

THE RISE OF JAPANESE CASTLE ARCHITECTURE
1573-1615

During the Azuchi-Momoyama Period, when fiefdoms began to unify after years of civil war, castles replaced temples as the architectural focus in Japan. Instead of timber construction, stone now dominated, transforming the appearance of cities. Interiors became more ornate, brightening the dark spaces of the stone castles.

28 HIMEJI CASTLE

the Royal Exhibition Building was the first building in Australia to be declared a UNESCO World Heritage Site
