

GYNAECIUM In ancient Greece, the women's quarters.

H

HACIENDA A large estate, especially in a Spanish-speaking country. The term is also applied to the type of manor house that would typically be found on a hacienda.

HAMMAM The Arabic name for a Turkish-style bathhouse.

HAMMER BEAM ▼ A short timber beam projecting from a wall on which the rafters that support the roof rest. This arrangement allows for greater spans than the normal arrangement, in which the width of the roof can be no longer than the length of individual timbers.

HARMONIC PROPORTIONS

A relationship between the dimensions of a building, or part of a building, that conforms to a mathematical formula that is closely bound to the ancient Greek concept of the golden ratio and the Fibonacci series. This describes the proportions that are most pleasing to the eye and echo those found in elements of nature.

HENGES A Neolithic earthwork featuring a circular bank and ditch.

HERM Originally, a sacred stone connected with the cult worship of the Greek god Hermes. Over time, the term came to refer to a pillar, generally square and tapering toward the bottom, suggestive of a male figure. Herms were often topped with a portrait bust.

HIGH-TECH An architectural style that emerged in the 1970s that visually references technology and industry in its outward design. Prime examples are the Georges Pompidou Centre in Paris, which displays the building's mechanical elements of ducts and piping on its outside, and the HSBC Hong Kong headquarters with its framework of columns and lateral supports that appears on the facade.

HIPPODROME In ancient Greece and Rome, a stadium for horse- and chariot-racing.

HISTORICISM The idea of drawing inspiration from recreating historical architectural styles.

HYPOSTYLE An interior space with a roof that rests on pillars or columns.

I

I-BEAM A steel beam with an I- or H-shaped cross-section. The vertical part is known as the web, while the horizontal parts are called flanges. It is also known as a universal beam (UB) or rolled-steel joist (RSJ).

ICONOSTASIS A wall or screen of icons that separates the nave from the sanctuary in an Eastern Christian church. *See also* church, nave.

INDUSTRIAL ARCHITECTURE

Buildings serving the needs of industry such as factories, power plants, mills, and warehouses.

INGLENOOK A recess set next to a fireplace where a person could sit to enjoy the warmth.

INTARSIA The fitting together of pieces of intricately cut wood of different types and colors to make often complex images.

IONIC One of the three main orders of ancient Greek architecture. It is characterized by having the narrowest columns, with capitals decorated by volutes. *See also* capitals, Classical, columns, Corinthian, Doric, order.

IWAN A vaulted hall, walled on three sides and open on the fourth. Iwans are typically placed facing the central courtyard of a mosque or *madrasa*.

J

JALI An ornamental lattice screen, often made of carved stone, commonly found in Hindu temples.

JOIST ▼ A load-bearing structural component that spans between walls to provide support for a floor or ceiling. A joist is a form of beam but one that is typically made of timber, spans short distances, and is associated with domestic architecture.

K

KASUGA-ZUKURI A Japanese Shinto temple style that incorporates Chinese-style roofs and a curved *chigi*; the shrine buildings are decorated with red, gold, and vermillion. A *kasuga-zukuri* has its entrance on the gable end, covered by a veranda. *See also* *chigi*.

KATSUOGI Short decorative logs placed horizontally and in a row along the ridges of roofs on Japanese Shinto shrines. They often feature in conjunction with *chigi*. They are purely decorative and have no structural function. *See also* *chigi*.

KEEP A large fortified tower within a castle or fortress. *See also* castle.

KEYSTONE The wedge-shaped stone at the apex of an arch. It is the final stone laid in construction and locks all the other stones in place, allowing the arch to be self-supporting and bear weight. *See also* arch.

KING POST A vertical post acting as a tie between the apex of a triangular truss and the crossbeam (also known as a tie beam). *See also* truss.

KING TRUSS A simple triangular framework on a single plane, used for roof construction. It is composed of a crossbeam with two diagonal rafters that meet to form an equilateral triangle. The crossbeam is secured to the rafters at their apex by a king post. There may also be additional supporting struts at an angle between the king post and the rafters. *See also* king post, truss.

KONDO The main shrine hall at the heart of a Japanese Buddhist temple compound. It may also be referred to in English as a *hondo*.
