

## INCA MOUNTAIN STRONGHOLDS

1438-1572

Faced with some of the roughest territory in the Andes, the engineers of the Inca civilization laid down an extensive network of roads, staircases, and suspension bridges to link the outposts of their empire. Without using mortar, they erected impressive stone citadels that were able to withstand earthquakes and remained impregnable for centuries.

## COLONIZERS EXPORT ARCHITECTURE

1521-1821

As colonial society was imposed on, and then absorbed into, the cultural landscape of Latin America, architectural hybrids evolved, marrying European tradition with local materials and artistic preferences. Among these new building styles were flamboyant Andean Baroque, expressive New Spanish Baroque, and elaborate Mexican Churrigueresque.

## INDUSTRY TAKES HOLD

1800-1914

The expansion of industry in Europe and the US propelled Latin America to ramp up its extraction of raw materials and its own manufacturing. At the same time, newly independent republics began to transform their cities. These two factors came together in the ambitious infrastructure and urban renewal projects that unfolded across the continent.

## CONTEMPORARY ARCHITECTURE

## 1945-PRESENT

An explosion of creativity, experimentation, and innovation characterized the second half of the 20th century, as urban planners attempted to establish a forward-thinking architectural identity for the many nations of the continent—from the avant-garde Brazilian capital of Brasília to the geodesic dome of the Poliedro de Caracas in Venezuela.
