

A small tail fin would have helped *Albertonectes* steer through water.

Albertonectes's long flippers were made up of many digit bones.

**MOST
NECK BONES**

AT A GLANCE

- **LENGTH** 36–39 ft (11–12 m)
- **DIET** Fish eater
- **LIVED** 83.5–70.6 MYA
- **HABITAT** Oceans

Crunchy ammonites might have made a tasty snack for *Albertonectes*.
