

STATS AND FACTS

Quetzalcoatlus probably weighed about 550 lb (240 kg), making it fairly light for its size. In comparison, the ostrich weighs about 344 lb (156 kg) and is less than half the height of this flying reptile.

FLYING SPEED

Scientists think that *Quetzalcoatlus* could fly at speeds of about 56 mph (90 kph).

DISTANCE

Quetzalcoatlus might have flown distances of up to 6,214 miles (10,000 km).

Giant glider

Quetzalcoatlus probably used all four of its limbs to propel itself into the air and only flapped its wings for a short while before using air currents to glide from place to place.

Quetzalcoatlus's body was probably covered in fine hairlike structures called pycnofibers, which were made from similar materials as bird feathers.

Quetzalcoatlus
was named after
the Aztec
serpent god
Quetzalcoatl.
