

A large, detailed illustration of a prehistoric shark, Otodus, swimming in a deep blue ocean. The shark is shown from a side profile, moving towards the right. Its mouth is slightly open, revealing sharp teeth. The shark's skin is a mottled grey and brown, with visible gills and fins. In the background, a sea turtle is visible, swimming away from the shark. The water is filled with bubbles and light rays, creating a dynamic underwater scene.

SUPER SHARK

Looking for a quick snack, a hungry *Otodus* shark speeds toward a sea turtle. The turtle tries to defend itself by turning its hard, bony shell toward the deadly predator—a defensive move also seen in modern-day turtles. However, *Otodus* possesses one of the strongest bites in the animal kingdom that is more than capable of piercing shell and bone, and the chances of this little turtle surviving look very slim.
