

Ambush hunter

Cameroceas hunted by ambushing its prey, grabbing its victims with its tentacles and pulling them up to its beaklike mouth, which could puncture shell and bone. *Cameroceas* probably preyed on armored fish, such as the tadpole-shaped *Sacabambaspis* seen here, or other shelled creatures—including its own kind!

Rigid, cone-shaped shell

GIANT SHELL

AT A GLANCE

- **LENGTH** 24½ ft (7.5 m)
- **DIET** Carnivore
- **LIVED** 470–425 MYA
- **HABITAT** Oceans

Hidden at the base of *Cameroceas*'s tentacles was a beaklike mouth.

A smaller *Cameroceas* has fallen prey to a larger individual.
