

## STATS AND FACTS

While most early dinosaurs weighed up to 77 lb (35 kg), *Herrerasaurus* topped the scales at 573 lb (260 kg). However, it was not the largest predator at the time. That position was held by the land-based prehistoric relatives of crocodylians.

### GRASPING FINGERS

*Herrerasaurus* had long, clawed fingers that may have helped it grasp prey.

### SKULL LENGTH

The most complete skull found measures around 12 in (30 cm), but some may have grown larger.

Slender but well-muscled legs

*Herrerasaurus*  
was named after  
**Victorino**  
**Herrera**, the farmer  
who first discovered  
its fossil.
