

A detailed illustration of a Temnodontosaurus, a large prehistoric shark-like creature, swimming in the ocean. The creature has a long, narrow body with a row of sharp teeth along its upper and lower jaws. Its skin is textured and brownish-grey. In the background, two smaller fish are visible, one of which is being eaten by the Temnodontosaurus. The water is a deep blue with some lighter blue highlights.

BIGGEST EYES

ON THE HUNT

Temnodontosaurus probably used a technique called "ram-feeding" to catch food, opening its jaws wide as it swam rapidly toward its prey. It did not chew its food, instead biting off and swallowing chunks whole.
