

HUNTING EXPERT

Spinosaurus's skull and teeth resembled those of modern crocodiles. Like present-day reptiles, *Spinosaurus* had ridged teeth without serrations, which would have improved its grip on slippery prey such as fish.

Spinosaurus may have preyed on the prehistoric swordfish *Onchopristis*.

Sail enigma

The exact use of the tall spines and sail projecting from *Spinosaurus*'s backbones is unclear. Scientists have suggested a range of possible purposes—from temperature control to fat storage or even display.
