

Tyrannosaurus's forward-facing eyes helped it judge distances perfectly.

LARGEST
TYRANNOSAURID

Tyrannosaurus had deadly teeth that could slice into its prey's flesh with ease.

Tiny forearms

Tyrannosaurus needed strong thigh muscles to power its huge legs.

Violent brawling

Skull biting appears to have been a common behavior in the tyrannosaurid family, indicating they often fought—and sometimes ate—one another. Many tyrannosaur skull bones, including some from youngsters, have been found with tooth marks and gouges.

STATS AND FACTS

9.8
TONS
WEIGHT OF AN ADULT T. REX

Tyrannosaurus grew rapidly during its teenage years, packing on the pounds at a rate of around 1,323 lb (600 kg) per year—which is almost 4½ lb (2 kg) a day!

SPEED

Recent research suggests that *Tyrannosaurus* may not have been very fast, with a top speed of about 12–18 mph (20–29 kph).

ARMS

Tyrannosaurus's tiny arms were strongly built and could lift up to 441 lb (200 kg) in weight.
