

TURNING THE TABLES

An unlucky *Teratophoneus* has been outmaneuvered and pinned down by its own prey. While the frilled herbivore *Utahceratops* might have made a good target for a hungry theropod like *Teratophoneus*, hunting such large prey is risky, and this time the predator has failed in its task. *Teratophoneus* would be wise to go after smaller prey next time, if it can survive the battle.
