

SKULL POWER

Carnotaurus's skull was relatively short compared to that of most other large carnivores. This theropod had two 6-in (15-cm) long horns, which might have been used in shoving matches, possibly to fight for territory or mates.

A fossilized skin sample shows that *Carnotaurus* had tiny, pebblelike scales on its body.

AT A GLANCE

- **LENGTH** 25½ ft (7.8 m)
- **DIET** Carnivore
- **LIVED** 72–70 MYA
- **HABITAT** Woodlands and forests
