

A detailed illustration of a Kosmocerotops dinosaur in a lush forest. The dinosaur is shown in profile, facing right, with its head lowered towards the ground. It has a dark grey, textured body with a prominent, multi-colored frill on its neck that transitions from red at the top to yellow and then to a lighter grey at the bottom. The frill is adorned with several small, light-colored spikes. The dinosaur's head features a large, curved horn on its right side and a smaller one on its left. Its eyes are small and orange. The background is a dense forest with tall, thin trees and a thick carpet of green ferns. A large, weathered tree stump is visible on the right side of the image. In the top right corner, there is a black box with a yellow border containing the title 'FRILLED FEEDER' and a paragraph of text. In the bottom right corner, there is a small yellow circle with the number '97' inside.

FRILLED FEEDER

This pair of *Kosmocerotops* probably spent the majority of their time resting and eating huge quantities of plant matter. While these giant herbivores look well armed with bony frills and horns, it is likely that they only had to use these defenses rarely. Like other ceratopsians, they may have used their fancy frills to attract mates.
