

Launching in India: Altium Develop and Altium Agile

Altium is excited to announce the launch of new, platform-based solutions that are transforming how electronics products are designed, built, and delivered: Altium Develop and Altium Agile. These solutions are the result of Altium's work as part of Renesas and our shared purpose: To Make Our Lives Easier.

At the heart of this purpose are two core beliefs: that advanced electronic design capabilities should be accessible to every engineer, everywhere; and that electronics development should be accessible to a broader market — enterprises of any size or industry.

What's New?

- **Altium Develop** delivers unlimited power for multidisciplinary electronics product creation via an out-of-the-box solution that enables teams to work together freely, with easy coordination among stakeholders.
- **Altium Agile** offers a solution for electronics product and system development for the modern agile enterprise, delivering control without the complexity of traditional enterprise software.
- **Altium Develop** and **Altium Agile** are built for today's distributed, flexible work environment, with shared data, shared context, and shared purpose — helping teams design, build, and deliver products faster than ever before.

Powered by the Altium Platform

These solutions are built upon the proven Altium Platform, trusted by designers worldwide and now evolved to deliver even greater capability and collaboration. This shared foundation ensures your tools work together seamlessly, enabling faster innovation, streamlined workflows, and a connected experience from design to delivery.

What This Means for Existing Customers

If you already use Altium, your tools and subscriptions continue without change. When you are ready, moving to Altium Develop and Altium Agile is a seamless upgrade — your designs, libraries, and workflows remain fully compatible. The familiar tools you rely on now expand onto a modern platform that adapts to your workflows, enhances collaboration, and unlocks new possibilities — without requiring you to change how you work. You will soon receive additional details about upgrading.

The Next Evolution: Octopart Discover

Octopart, an Altium Company, also recently introduced Octopart Discover, the next evolution of Octopart that brings design intent and persistent system context into solutions discovery — moving engineers beyond part search to discovering and evaluating system-fit solutions. Octopart Discover is expected to be available in the second half of 2026.

Together, we're shaping the future of electronics design — making it easier, faster, and more powerful for everyone.
