

Two Tools; One Goal - *Perfect Troubleshooting*

BoardWalker9627 In-Circuit Functional Tester

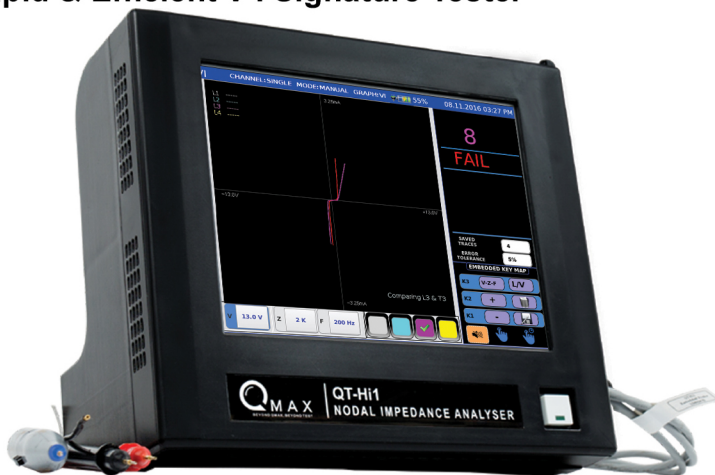

- * In-circuit functional test with powerful Qmax Device Library (digital / analog / mixed signal) of 39000+ devices
- * Test most of the logic families: TTL / CMOS 5V and 12V / ECL / EIA / LSI / Linear / Memory
- * Functional testing without need of learning from known good board
- * Qmax patented Best Fit Curve for VI Signature test for enhanced fault coverage
- * IEEE standard VHDL language based simulator for effective LSI/VLSI ICs testing
- * Auto circuit compensation for digital devices & IC Identify for identifying unknown digital ICs
- * User defined QSM-VI stimulus with test frequency is fully Programmable up to 100KHz
- * GUI rich TestDirector Interactive Workstation, Test-Sequencer, TestStation software modules
- * Board level functional test along with guided probe back tracking
- * Boundary Scan Test system meets IEEE 1149.1 standards
- * In-circuit walking Test Clips, Out Circuit Test adapters for variety of IC packages and Customized - Card Edge / Bed of Nails Test fixtures

QT-Hi1

Portable Nodal Impedance Analyzer Rapid & Efficient V-I Signature Tester

- * Patented Best Fit Curve Technology automatically select the best fit values of voltage, frequency and source impedance of the stimulus waveform
- * 8-inch touch screen graphical display and Smart embedded key Probe
- * Portable unit with in-built battery backup for onsite trouble-shooting and fault analysis
- * Voltage Vs Current (VI), Voltage vs Time (VT) graphs, in both Auto & Manual mode
- * Voltage range up to 13V and Frequency is up to 50KHz
- * Dual mode for simultaneous comparison of VI traces between Good PCB & Unknown PCB
- * Audio Buzzer for mismatch of VI trace between current trace and stored / learnt trace
