- Global telecom players join Nvidia to shape AI-native 6G networks
- Viasat and BSNL kick off first satellite skilling course in India

a 101-acre (about 41 hectares) plot in Khalapur, Maharashtra, to build a semiconductor manufacturing and advanced packaging campus. Planned in phases, with investments exceeding ₹360 billion, the facility will house OSAT and wafer-level packaging lines, with potential fab units later.

Dixon seals ₹1 billion joint venture with Longcheer

Dixon Technologies has finalised its JV with Longcheer Intelligence to form Dixtel Infocomm, with Dixon investing ₹73.9 million for a 74% stake and Longcheer investing ₹26 million for a 26% stake. The venture will manufacture smartphones, tablets, AI PCs, and smartwatches, combining Dixon's manufacturing scale with Longcheer's ODM design capabilities.

Arkel India opens ₹1 billion lift electronics facility in Vadodara

Arkel Electronic India has opened a ₹1 billion lift control systems manufacturing facility at Vadodara, spanning 12,542 square metres (135,000 square feet) with automated PCB assembly lines and semi-automatic control panel production. The plant, aligned with Make in India, will produce 36,000 units annually, reducing imports and supporting the elevator market for residential, commercial, and infrastructure projects.

Infosys and Intel expand partnership to scale AI

Infosys and Intel have expanded their partnership to help enterprises scale AI from pilots to full production. Integrating Infosys Topaz Fabric with Intel's compute platforms, including Xeon processors, Gaudi AI accelerators, and AI PCs, the collaboration will co-develop, optimise, and benchmark AI workloads, delivering secure, cost-efficient, open-standards solutions for mission-critical enterprise applications across the edge-to-cloud ecosystem.

Silicon Labs expands Hyderabad site, deepens US-India tech ties

Silicon Labs has expanded its Hyderabad operations by 50%, adding advanced laboratories and collaboration spaces to support wireless design, validation, and system integration. Inaugurated by Laura E. Williams, US Consul General, the expansion reflects growing US-India technology collaboration.

BEL and Bellatrix unite to develop VLEO satellites

Bharat Electronics Limited (BEL) has signed an MoU with Bellatrix Aerospace to jointly develop satellite systems and payloads for very low Earth orbit (VLEO) missions. Combining BEL's electronics expertise with Bellatrix's propulsion technologies, the partnership aims to advance indigenous satellite platforms for communication, Earth observation, and surveillance across strategic and civilian space applications.

MeitY unveils indigenous 30kW EV drive system

The Ministry of Electronics and Information Technology (MeitY) has launched an indigenous 30kW wide band gap-based integrated drive system for electric vehicles, unveiled at the Indian Institute of Technology Madras. Developed by the Centre for Development of Advanced Computing in collaboration with IIT Madras and Lucas TVS, the compact motor-inverter unit aims to reduce dependence on EV imports and strengthen India's power electronics ecosystem.

C2i Semiconductors raises \$15 million to tackle AI power challenges

C2i Semiconductors has raised \$15 million in a round led by Peak XV Partners, with Yali Deeptech and TDK Ventures participating. Founded by former Texas Instruments executives, the startup is developing 'grid-to-core' power management chips for AI data centres. The first silicon tape-outs are due in 2026, targeting improved efficiency, GPU performance, and server reliability for hyperscale infrastructure.

Vervesemi Microelectronics secures \$10 million to advance chip design

Vervesemi Microelectronics has raised \$10 million in a Series A round led by Ashish Kacholia and Unicorn India Ventures. Backed by the Design Linked Incentive Scheme, the startup will use the funds to commercialise ML-enabled analogue chips, scale production, and expand global markets across space, defence, EV, industrial and smart energy applications.

AGNIT Semiconductors secures \$2.6 million to scale GaN production

AGNIT Semiconductors has raised \$2.6 million in a seed extension round led by Shastra VC, with participation from 3one4 Capital and Zephyr Peacock. The Bengaluru startup will scale production of gallium nitride components to 100,000 units and expand into telecom and power electronics as it moves towards commercial manufacturing.

Suchi Semicon expands chip manufacturing ties with ROHM and HCLTech

Suchi Semicon Pvt Ltd has partnered with ROHM Co., Ltd and HCLTech to strengthen semiconductor manufacturing and design in India. ROHM plans to outsource the back-end production of power devices and IC packages to Suchi, while HCLTech will collaborate on semiconductor design, testing, and AI-driven automation, targeting the automotive, telecom, and consumer electronics markets.
