

EMBEDDED

Provisioning tool

Raspberry Pi has released rpi-sb-provisioner 2.3, adding new features

to simplify the secure deployment of embedded Linux systems at scale. The

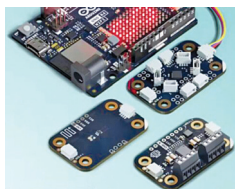

update introduces image description provisioning (IDP), enabling program-mable operating system deployment with custom partition layouts and broader OS support. Enhanced cryptographic capabilities strengthen secure boot and full-disk encryption by protecting private keys during provisioning, making the software well-suited for enterprise and large-scale embedded device deployments.

Plug-and-play modules

Arduino has introduced three new Modulino modules, expanding its plug-and-play hardware ecosystem

for embedded development. The additions include the Modulino Hub for resolving I2C address

conflicts, an I2C extender for reliable long-distance communication, and a motor control module for driving DC and stepper motors. Designed for robotics, automation, and distributed sensing applications, the modules connect through Qwiic interfaces and support daisy-chaining, enabling developers to expand Arduino-based

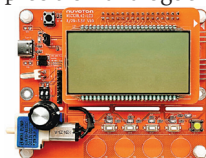

systems with minimal wiring, software changes, or hardware redesign.

Microcontroller SoC

Nuvoton Technology has introduced the NSC128L42, a 32-bit Arm Cortex-M23 microcontroller SoC that combines precision analogue functions, display

driving, and audio capabilities on a single chip. Designed for

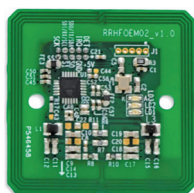

medical devices, portable test equipment, electronic weighing scales, and industrial control systems, the microcontroller reduces external component requirements, board space, and development cost. It integrates high-resolution signal acquisition, low-power operation, built-in audio output, and multiple communication interfaces, enabling compact, energy-efficient embedded designs while simplifying development of smart measurement and human-machine interface applications.

Multiprotocol HF RFID module

RapidRadio has introduced the RRH-FOEM02, a compact multiprotocol HF RFID reader/writer OEM module for embedded applications requiring secure card-based interaction. Its integrated PCB antenna eliminates external antenna design, reducing development time and simplifying integration. Designed for access control, ticketing, medical devices, and EV applications,

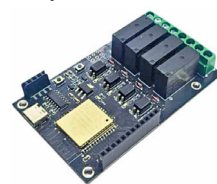

the module also offers multiple host interfaces, automatic tag detection, and firmware customisation for flexible embedded system development.

Four-channel IoT relay board

Rajguru Electronics (I) Pvt Ltd has introduced the ADIY 4-channel IoT relay board, an ESP32-based controller

that combines Wi-Fi connectivity with four isolated relay outputs for remote switching and

automation. Designed for smart homes, industrial automation, IoT devices, remote monitoring, and point-of-sale systems, the board enables reliable control of AC and DC loads while simplifying embedded development. Integrated GPIO and I2C expansion, USB Type-C programming, and optocoupler-based isolation provide flexibility, safety, and easy integration into connected control and monitoring applications.

TEST & MEASUREMENT

RF analysers

Keysight Technologies has introduced the Pro XA6 SA6320A and Expert XA5 SA6210A RF signal analysers, designed

Keysight Pro XA6 SA6320A signal analyser

Keysight Expert XA5 SA6210A signal analyser

to simplify testing of next-generation wireless and radar systems. The instruments provide wider signal capture, faster measurements, and enhanced visibility into complex RF behaviour, enabling engineers
