

Ranked by deal value • Source: TCAL India Semiconductor Transaction Tracker

M&A		VC / PE Growth				
#	Company / Target	Type	Acquirer / Lead Investor	Deal Value	Date	Why It Matters
01	Kinara Inc. (Santa Clara / Hyderabad)	M&A	NXP Semiconductors (Netherlands)	USD 307 Mn All-cash	Feb 2025	Largest India semi acquisition. Edge AI NPU IP. Validated India chip design as strategic acquirer destination.
02	Kinetic Technologies (San Jose, USA)	M&A	Cyient Semiconductors (India - Outbound)	Up to USD 93 Mn 65%+ stake	Dec 2025	Largest India outbound semi M&A. Custom power semiconductor platform for AI/datacenter. Closed ~Apr 2026.
03	OXMIQ Labs (Hyderabad + Bengaluru)	VC / PE	Samsung Catalyst Fund, MediaTek, Fundomo + others	USD 55 Mn total (Seed USD 20 Mn + Series A USD 35 Mn)	Aug 2025 / Jul 2026	India's largest GPU architecture IP play. Founded by Raja Koduri (ex-Intel/AMD). Samsung + MediaTek backing.
04	InSemi (Bengaluru, India)	M&A	Infosys (Bengaluru, India)	USD 30 Mn	Jan 2024	Adds niche semiconductor design + embedded services to Infosys Chip-to-Cloud strategy.
05	Cyient Semiconductors (Hyderabad, India)	VC / PE	EAAA India Alternatives (Edelweiss) + co-investors	USD 30 Mn (USD 10 Mn eq + USD 20 Mn debt)	May 2026	First significant PE growth round in Indian fabless ASSP platform. Post-money valuation: USD 500Mn.
06	SiliConch Systems (Bengaluru, India)	M&A	L&T Semiconductor Technologies (India)	USD 20 Mn	Jul 2024	SoC IP + patents + 61-engineer team; anchors L&T's fabless semiconductor build-out.
07	Fujitsu General Electronics - Power Modules (Japan)	M&A	L&T Semi + Kaynes Semicon (India - Outbound)	USD 14 Mn	Jun 2025	First India outbound acquisition of Japanese semiconductor assets. Power module tech + production

The top seven transactions in the last two years

He highlights that although fabrication projects often dominate headlines, much of the private capital entering India's semiconductor sector is flowing towards companies developing differentiated technologies, products, and IP. This reflects a broader shift in how investors evaluate semiconductor businesses.

"Today's transactions are no longer driven purely by the size of a business. Instead, buyers are primarily interested in acquiring specialised capabilities, particularly in deep technology and IP," says Gaurav.

Rather than expanding manufacturing capacity alone, investors are seeking proprietary technologies and specialised engineering expertise that can strengthen product portfolios or accelerate innovation. For India, this marks an important transition from being recognised primarily for semiconductor design services to building globally competitive semiconductor products.

"Ownership of IP has become one of the strongest drivers of valuation," says Gaurav.

The same trend is visible in growth capital. Series A and subsequent funding rounds in the semiconductor sector typically

range from US\$10 million to US\$30 million, depending on a company's business model, technology maturity, and target markets. Capital-intensive projects such as fabrication plants continue to rely on patient capital from strategic investors and government-backed partnerships, with returns typically expected over 5 to 10 years.

Five deal models are emerging

As India's semiconductor ecosystem matures, five distinct transaction models are emerging.

The first is **capability or technology acquisition**, where global semiconductor companies acquire businesses primarily for their proprietary technologies rather than their revenue streams. Acquiring proven technology is often faster and less risky than developing it internally.

The second model centres on **technology partnerships**, with companies initially entering technology transfer agreements or joint ventures before considering deeper strategic integration.

A third trend is **outbound capability acquisition**, where Indian semiconductor firms are acquiring overseas companies to access specialised technologies, engineering

expertise, established distribution networks, and international customers. Such transactions can also benefit from valuation arbitrage, particularly in developed markets such as Europe and Japan.

The fourth model is **platform creation through growth capital**, where private equity firms invest in multiple businesses to build integrated semiconductor platforms capable of reaching IPO scale or attracting strategic acquirers.

Finally, capital-intensive projects such as semiconductor fabrication plants are increasingly financed through **strategic or anchor investments**, with multiple long-term investors participating rather than relying on a single acquirer.

Together, these models highlight the growing sophistication of India's semiconductor investment ecosystem and the increasingly diverse sources of capital.

Global investment corridors are taking shape

Different regions are pursuing partnerships with India, aligned with their technological and strategic priorities:

US and technology-led acquisitions. The US remains one of the
