

Hardware support packages for microcontrollers

MathWorks has introduced new hardware support packages for Renesas microcontrollers, enabling direct deployment of MATLAB and Simulink models to embedded hardware. By eliminating manual initialisation and custom build processes, it accelerates prototyping, validation, and design iterations for automotive and industrial applications, including motor control, robotics, electric vehicles, ADAS, and electronic control units.

Gaming GPU card

AMD has expanded its RDNA 4 graphics portfolio with the launch of the Radeon RX 9070 GRE, a mainstream gaming GPU aimed at delivering high-quality 1440p performance through a combination of hardware and software-driven rendering technologies. Featuring dedicated AI acceleration, next-generation ray-tracing capabilities and 12GB memory, the card is designed to handle modern gaming workloads with greater efficiency and visual fidelity.

Radar for vehicle speed and traffic monitoring

Rajguru Electronics (I) Private Limited has introduced the HLK-LD2415H, a compact 24GHz millimetre-wave radar module for vehicle

speed measurement and traffic monitoring applications. Designed for roadside warning systems, intersections, and traffic management networks, the module can detect vehicles from long distances and deliver real-time speed data to external control systems. It combines radar sensing, signal processing, and communication interfaces in a compact form factor, supporting flexible integration into smart traffic infrastructure.

System-on-Module

Calixto Systems has launched the SL1680 Optima System-on-Module (SoM), an edge AI platform designed for computer vision, video analytics, robotics and industrial automation applications. The SoM supports machine learning workloads such as object detection, image recognition, and video analysis while reducing dependence on cloud connectivity. Integrated multimedia capabilities, industrial connectivity interfaces, and security features make it suitable for surveillance, smart automation, human-machine interfaces, and other AI-enabled edge systems.

MANUFACTURING EQUIPMENT & MATERIALS

Lift-dip soldering module

EUTECT has launched an optimised lift-dip soldering module designed

to deliver precise and repeatable solder joints in automated manufacturing. The system supports applications including stator tinning, enamelled copper wires, strands, and other components requiring controlled solder application.

The module also offers options and automated dross removal. Suitable for various assembly types and production volumes, it supports process control, quality monitoring, and reliable soldering performance.

Tray feeder for heavy SMD parts

Quasys has introduced the JTF3 G3 tray feeder, an automated system

designed to streamline the handling of large and heavy SMD components supplied in JEDEC trays. Developed for semiconductor and electronics manufacturing, the feeder supports continuous component feeding while reducing manual intervention and handling errors. Suitable for placement, testing, inspection, and packaging processes, the system helps improve production efficiency, reliability, and automated tray-based component handling.

TEST & MEASUREMENT

AWGs with sequence restart mode

Spectrum Instrumentation has introduced sequence restart mode for its arbitrary waveform generators (AWGs), enabling waveform sequences to restart
