Diodec's GBI25J-LV Rectifier Bridge Delivers 20% Power Savings for 24/7 Industrial and Server Applications

The GBI25J-LV by Diodec Semiconductor is a rectifier bridge in GBI single inline case. It offers 10% lower forward voltage drop per single diode, compared to the standard version GBI25J. Since always two diodes are conducting per mains half-cycle, the total power savings at the input bridge are even 20%. These parts have been developed for power supplies running 24/7, e. g. used to power up internet server stations. Output current is 25 A when case is kept at 80°C. Forward surge current rating is 325/360 A at 10/8.3 ms half sine wave pulse, and repetitive peak reverse voltage 600 V. Applications include server stations, computer networks, base stations, industrial controls and drives, and many more.

Low Vf Bridge Rectifier

GBI25J-LV

25 A | 600 V | Single Inline Case

Save up to 20 % of Energy in

Server Power Supplies

Features

- Low Vf diodes
- Up to 20% of energy savings
- Single inline case
- 7.5 ... 10 mm pitch
- Easy heatsink assembly
- High forward surge current

Applications

- Power supplies operating 24/7
- Server stations
- Computer networks
- Base stations
- Industrial controls and drives

Specifications

- Nominal 25 A output current at 80°C case temperature (IFAV)
- Peak reverse voltage 600 V (VRRM)
- Forward voltage < 0.92 V at 12.5 A / 25°C (VF)
- Reverse current < 5 µA at 1000 V / 25°C (IR)
- GBI single inline case with 10 mm respectively 2x 7.5 mm pitch
