

Graphite Foils for Thermal Applications

HEXAFLEX® OMEGA / OMEGA TC+

Ultra-high purity flexible graphite foils for advanced thermal management

Engineered for efficient heat spreading in demanding electronics and high-performance thermal environments.

- >99.9% carbon purity
- Thermal & electrical conductivity
- Energy transfer & heat dissipation
- High in-plane thermal conductivity for effective heat dissipation
- Made in India

OMEGA:
Ultra-high purity graphite foil for critical high-temperature applications

OMEGA TC+:
Enhanced thermal conductivity for aggressive heat dissipation needs

TRUSTED
ACROSS
ADVANCED
APPLICATIONS

Semiconductors

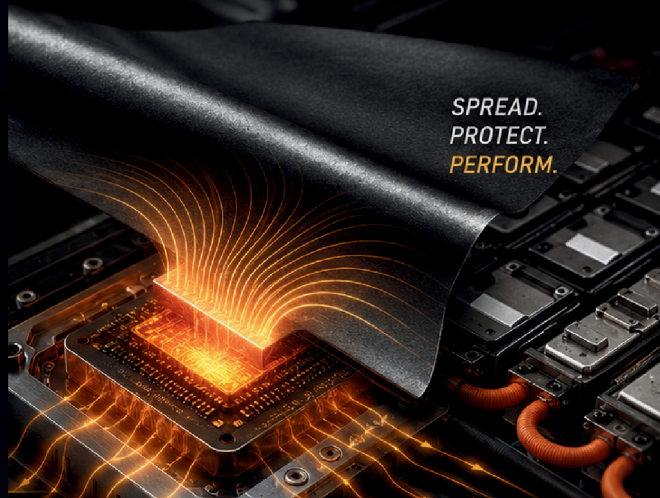

Power Electronics

Battery Systems

Advanced Heat Spreaders

Designed for Heat.
Built for Reliability.

Control What Matters

Intelligent pump features designed to manage complexity.

Intelligence brings calm to complex systems. Our pumps with intelligent features give engineers the peace of mind to focus on what really matters – maximum certainty, no surprises. With our features for advanced pump control, you manage your system automatically and with ease, exactly when it matters most.

Pressure Control

Vacuum Control

Flow Control

Versatile Dosing

Visit knf.com/control-what-matters to learn more about our cutting-edge intelligent pump features.
