

Odisha launches India's first advanced 3D chip unit

(Photo Credit: www.eetindia.co.in)

Odisha broke ground on India's first advanced 3D chip packaging facility in Bhubaneswar, featuring a ₹19.43 billion investment and cutting-edge glass substrate technology. Developed by 3D Glass Solutions Inc. (3DGS) through its Indian subsidiary, Heterogeneous Integration Packaging Solutions Pvt Ltd (HIPSPL), the plant targets an annual capacity of 50 million units for the aerospace, defence, and AI sectors, creating roughly 2500 direct and indirect jobs.

ASML joins Tata Electronics to build India's first fab in Dholera

Tata Electronics and ASML have signed an MoU to accelerate India's semiconductor manufacturing ecosystem, with a focus on the upcoming 300mm fab in Dholera, Gujarat. ASML will provide advanced lithography tools, supply chain support, and talent development initiatives to ensure the success of the \$11 billion project. This strategic partnership aims to build a resilient, high-tech manufacturing base in India.

India approves two new semiconductor units under ISM, totalling ₹39.36 billion

The Union Cabinet has approved two new semiconductor projects in Gujarat under the India Semiconductor Mission, featuring India's first commercial GaN-based Mini/Micro-LED display facility by Crystal Matrix in Dholera and a new OSAT plant by Suchi Semicon in Surat. With a combined investment of ₹39.36 billion, these projects will create 2230 jobs and increase the total approved ISM projects to 12, worth ₹1.64 trillion.

Nvidia leases massive Bengaluru office in ₹12.3 billion deal

Nvidia leased 760,000 square feet (approx. 70,600 square metres) of office space at Memphis South Tower in Bengaluru's Mahadevpura area. Valued at over ₹12.3 billion, the ten-year deal commenced on April 1, 2026, from Bagmane Constructions. This massive transaction highlights growing global demand for premium Indian tech spaces and Bengaluru's role as a booming semiconductor hub.

Malaysia's Hotayi Electronics to invest ₹7 billion in Gujarat's semiconductor facility

Malaysia-based Hotayi Electronics will invest ₹7 billion over ten years to build an advanced semiconductor and electronics manufacturing facility in Sanand, Gujarat. The plant, on five hectares, will produce DRAM modules, SSDs, server memory, and automotive electronics. The project aims to boost Gujarat's semiconductor ecosystem, drive AI-enabled smart manufacturing, and create significant

employment opportunities.

Punjab invites NXP to consider an R&D facility in Mohali

During his visit to the Netherlands in April 2026, Punjab Chief Minister Bhagwant Mann invited NXP Semiconductors to establish an R&D centre in Mohali's upcoming Kalkat Bhawan tech cluster. Backed by the state's 2026 industrial policy, the project leverages local automotive ecosystems and premier institutes like IIT Ropar. Discussions also explored system design partnerships and startup engagement programmes.

SpaceX plans \$55 billion chip fab in Texas

SpaceX has proposed a \$55 billion initial investment to build 'Terafab,' a Texas semiconductor plant developed with Tesla to boost domestic chip production. Potentially expanding to \$119 billion, the facility will manufacture custom GPUs using Intel's 14A process. The chips will power Tesla's autonomous vehicles, humanoid robots, and xAI's space-based data centres.
