India's Smartphone Production Rises 8% In 2025

India's smartphone manufacturing grew 8% YoY in 2025, driven by a 28% export surge, with exports contributing nearly one-third of output, while domestic growth remained at 1%. EMS shares (YoY) shifted as Dixon rose from 11% to 19%, Foxconn from 12% to 16%, Samsung eased from 20% to 18%, vivo fell from 14% to 10%, and Bhagwati entered the top 5 with a 9% share. Dixon topped the production growth with an 89% surge, followed by Foxconn at 40%, while Samsung grew 4% YoY.

Semiconductor Sales Hit \$298.5 Billion Globally In Q1 2026

Global semiconductor sales reached \$298.5 billion in Q1 2026, rising 25% QoQ. March 2026 sales reached \$99.5 billion, up 79.2% YoY and 11.5% MoM. Asia Pacific led growth at 108.5% YoY, followed by the Americas (83.1%) and China (74.8%). March revenues stood at \$33.81 billion in the Americas and \$28.72 billion in Asia Pacific, keeping the industry on track to cross \$1 trillion in 2026.

Global Semiconductor Revenues To Jump 62.7% In 2026

Global semiconductor revenues are projected to jump 62.7% in 2026, driven by booming memory demand, tight supply and AI-led data centre growth. DRAM revenues are expected to nearly double, while NAND could grow up to four times its 2025 level. Computing and storage revenues may rise about 90% year-on-year, surpassing \$700 billion, supported by server refresh cycles and memory-intensive AI workloads.

Power Electronics Market To Exceed \$65 Billion Globally By 2036

The global power electronics market is projected to exceed US\$65 billion by 2036, growing at a 10% CAGR, driven mainly by EVs and data centres. SiC MOSFETs are expected to dominate EV traction inverters, onboard chargers, and DC-DC converters by 2036, while AI-led data centres move towards 800V DC systems supporting rack capacities of up to 1MW by the end of the decade.
