

motion sensor pairs a low-profile form with much higher motion sensitivity and a wide  $\sim 136^\circ$  field of view,

letting a single unit cover up to  $\sim 15\text{m}$  in diameter and reduce

blind spots. Its 416 detection zones and versatile outputs are built for building automation, lighting control, and smart homes, enabling more accurate occupancy and motion detection with discreet, design-friendly hardware.

## Hybrid electrolytic capacitors

Taiyo Yuden has started volume production of next-gen conductive-polymer hybrid electrolytic capacitors

with higher ripple current and lower profile to meet tougher power demands in automotive and industrial

systems. The expanded HVX-J/HTX-J lineup offers up to  $\sim 70\%$  more ripple handling and a range of compact sizes, aiding EV power control, ADAS circuits, and noise suppression in tight layouts where reliability and space-efficient power smoothing matter most.

## DC-DC converters

RECOM's new compact isolated DC-DC converters are built for space-limited

systems where power density and reliability matter most. Housed in industry-standard

$2.5\text{cm} \times 2.5\text{cm}$  and low-profile packages, they deliver 10W-30W outputs, wide input ranges, and tight voltage regulation while keeping low ripple and noise. These modules fit industrial automation, telecom gear, and automotive power stages where board area is tight but robust power conversion is critical.

## CO<sub>2</sub> sensor

Senseair's new ultra-compact CO<sub>2</sub>

sensor shrinks conventional modules by about 75% while maintaining accurate NDIR-based measurements and

ultra-low-power operation, allowing designers to mount it directly on boards via standard reflow. Its tiny size and

efficiency are geared toward demand-controlled ventilation in buildings, indoor air-quality systems, and battery-powered IAQ monitors, easing integration in constrained spaces and broadening deployment in energy-efficient HVAC and smart environments.

## Workstation processors

Intel's new Xeon 600-series workstation processors are engineered to break through performance bottlenecks in AI, simulation, rendering,

and large-data workflows by boosting core counts, memory bandwidth, and I/O capacity. Built on Intel 3 and featuring

up to 86 cores, they speed up multi-threaded compute tasks while improving power efficiency. The platform targets professional workstations in AI development, engineering analysis, media creation, and scientific data processing

## AI-enabled microcontrollers

AI-enabled microcontrollers are increasingly shaping EV powertrain

control and safety, embedding dedicated AI accelerators certified to ASIL-D standards into

automotive MCUs to handle complex, safety-critical tasks in real time. These chips can support motor control, battery management, and motion control, improving responsiveness and predictive capabilities. By pushing intelligent control onto the edge rather than the cloud, they help EV systems make faster decisions, enhance efficiency,

and simplify powertrain software stacks.

## Thermal imaging sensor

LYNRED's YOCTO ultra-compact thermal imaging sensor brings

high-resolution LWIR imaging into very small footprints. By boosting pixel density without increasing size, it delivers

sharper detection and recognition performance for portable systems. The tiny module suits handheld thermal imagers, drones, fixed observation optics, and weapon sights, enabling clearer long-range thermal views in space-limited devices.

## EMBEDDED

### Wireless UNO-style board

A new UNO-format development board is expanding options for makers

moving into connected hardware. Built around a dual-core ESP32 with integrated Wi-Fi and

Bluetooth, the board keeps shield compatibility while adding modern interfaces and USB-C connectivity. The design targets applications such as home-automation nodes, connected sensors, and lightweight robotics, enabling developers to upgrade legacy Arduino projects without reworking home automation nodes, connected sensors, and lightweight robotics, enabling layouts or accessories.
