

How Anthropic Triggered A Tech Stock Meltdown Last Month – Four Points To Ponder

*Rise of AI threatens traditional IT services, rocking global stock markets
(Image generated using Nano Banana on Yupp.ai)*

With the rampant spread of AI (and the hype), tech stocks were bound to crash at some point – a jolt to make the industry rethink and reshape itself. Recent releases from Anthropic simply became the inflection point, a worthy one nonetheless.

The unveiling of Claude Cowork, which extends the benefits of the hugely popular Claude Code to non-programmers, and Opus 4.6, which greatly enhances the capabilities of Code and Cowork, led to a slide in tech stock values worldwide, especially undermining large IT services companies. We break down this development into four parts for you to mull over.

1. Runaway success of Claude Code

This whole story starts with **developers falling in love with Claude Code,**

which was launched in 2024. Surveys show that many developers these days prefer **vibe-coding**. That is, they focus on creative aspects such as design and prototyping, leaving coding to AI assistants like Anthropic's Claude Code, OpenAI's Codex, Microsoft's GitHub Copilot, or Google's Gemini Code Assist. They simply **describe their needs using natural-language prompts, and the AI assistant generates the code**. No more worrying about cumbersome syntax and murky code reviews. Although every tech major has its own AI coding assistant, it is well
