

known among the developer community that Claude Code is a class apart from the rest. The buzz is that even developers at Google, Microsoft, and OpenAI use Claude Code to get their work done!

In a recent X post, Boris Cherny, who heads Anthropic's Claude Code, said that 100% of his code is now written by Claude Code and Opus 4.5, and that he has not written any code in over two months. Speaking at the World Economic Forum in January this year, **Anthropic CEO Dario Amodei predicted that in the next six to 12 months, advanced AI models will be able to handle most, if not all, software engineering work from end-to-end.** Many other tech majors have also openly admitted to AI assistants writing a significant amount of code within their organisations. While some developers feel threatened by this trend, many see it as a boon. It helps them to get more done in less time—and to focus their skills on prototyping, editing, and so on.

2. Claude Cowork extends benefits to non-coders

While revelling in the runaway success of Claude Code, Anthropic soon realised that developers were **using Claude Code not just for coding, but for a lot of general-purpose tasks** too—for example, to browse through a large folder and find some information, or to study and interpret some figures, to respond to emails, and so on. Many, including Cherny, claim to use Claude Code **to handle project management tasks**, like automatically following up with team members for weekly updates.

This realisation led them to develop **Claude Cowork, an agentic system for non-coding tasks, built on the same foundations of Claude Code.** At its most basic, it is an intelligent file management and automation tool that can handle multi-step tasks autonomously, with minimal

human hand holding. It can read, draft, and review documents, handle correspondence, and execute multi-step workflows across legal, finance, sales, and marketing. For example, you can ask it to review a set of screenshots or invoices and prepare your account statement, or to identify spending trends and generate a presentation based on the spending. You can make it respond to customer requests or complaints over email, and initiate required actions for each. Claude Cowork is a proper autonomous agent that not only provides answers but also helps you by taking action.

Released in phases across January and February 2026, **Claude Cowork is now available for both Windows and macOS, and includes 11 open source plugins that cover various verticals and functions - productivity, enterprise search, sales, finance, data analytics, legal, marketing, customer support, product management, bio-research tools, and plugin create utility** (which you can use to easily create a plugin for your own specific needs).

The **legal plugin has sent waves through the industry**, automating tasks such as non-disclosure agreement (NDA) triage, contract review, compliance tracking, and legal risk assessment, which companies often handle with large, expensive teams.

3. Opus 4.6 takes all this to the next level

On the heels of Cowork, Anthropic unveiled its latest model, Opus 4.6, which elevates the capabilities of Code and Cowork. As per early reviews, it handles complex **multi-step coding jobs** with ease, even those that require careful planning and tool calling. Opus 4.6 makes it possible to **assemble and manage teams of AI agents to work synchronously** on varied tasks. It also features 'adaptive thinking' or the ability to understand contextual clues on how much to use its extended thinking, and 'effort controls' that

Pico PC Scopes

– Proven with Performance

pico
Technology

Pico Technologies, UK is a market leader in PC Oscilloscopes – the modern alternative to traditional bench top oscilloscopes. Pick your choice from Pico's wide range for different applications supported with next-generation user interface (available for Windows, Mac & Unix) for any real-time PicoScope. PicoScope 7 software has all the analysis tools you need to get answers quickly, whether carrying out a simple test, or debugging a complex design. Go for your Pico, a preferred choice of many with assured support from Qmax, your reliable sourcing partner.

Ultra Compact 2000 series
– 10MHz to 100MHz

High performance 3000E series
– 100MHz to 500 MHz

General Purpose 3000D series
– 50MHz to 200MHz with/without MSO

High resolution 4000 series
– 5MHz to 20MHz

Flexible resolution 5000 series
– 60MHz to 200MHz

High performance 6000 series
– with flexi resolution & ultra deep memory
– 300MHz to 3 GHz

Unique 9000 series
– 5GHz to 33GHz with effective sampling
up to 5TS/s
