Memory Prices Skyrocket 90% In January-February 2026, Industry Feels The Heat

Memory prices jumped 80%-90% QoQ in Q1 2026 until mid-February, with server DRAM and NAND both surging. Server 64GB RDIMM rose from \$450 in Q4 2025 to over \$900 in Q1 and may cross \$1000 in the second quarter. PC DRAM (8GB DDR4) climbed 35% in Q4 2025, 91% in Q1 2026, and might increase by 20% in Q2 2026E, while server DRAM jumped 76%, 98%, and 20% at the same time. This rise is reshaping smartphone costs, with DRAM and storage now accounting for 20% or more of the BoM for flagship devices.
