

Dry Cabinets

The most advanced Drying solutions for MSDs

Our Dry Cabinet Solutions deliver a low, controlled level of humidity (**upto <0.5%**). This qualifies them for safely removing moisture with an optional 40°- 60°C temperature and thereby resetting the **Floor Life** without oxidation, even at ambient temperatures.

The combination of the ultra low humidity and 40°- 60°C temperatures ensures the fastest drying times possible, exceeding IPC/ JEDEC-J-STD-033D standards **without** damaging components.

Other available cabinets with smart **Pick-By-Light** guidance for reels, both Drying & Cooling in the same cabinet and also solder paste FIFO cold storage cabinets. We offer a range of advance software through **Totech Storage Manager Software Suite** to track and monitor multiple cabinets in different areas of the facilities use to stored components as well as solder paste.
