

RapidRadio

Stop Importing RFID Hardware Start Building with RapidRadio Modules

20+ years of indigenous RFID hardware design & manufacturing. OEM modules for reader manufacturers. Ready-to-deploy readers with SDK for system integrators.

UHF RFID OEM Module

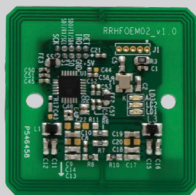

India's First Make-in-India
Low-Cost UHF RFID Module
— Powered by Impinj

Dimensions: 104 x 60 mm

HF RFID OEM Module

Multiprotocol HF RFID
reader/writer OEM module
with internal antenna

Dimensions: 35 x 35 mm

DISPLAY INDUSTRIAL SOLUTIONS VISIONS

- Brilliant IPS displays
- PCAP touch panel
- PLC compact controller with TFT satellites
- Modbus HMI
- COG text and graphics
- SPI, RS-232, I²C bus
- OLED for the industry
- USB/WiFi data logger
- Evaluation boards
- Demo for Arduino, Raspberry

Diotec Semiconductor

Practical Thinking: Power Converters with Diotec MOSFETs

When designing power supplies, optimizing for efficiency is crucial. High efficiency reduces energy consumption, minimizes heat generation, and can even reduce the size of the power supply. When selecting MOSFETs, power engineers often face the challenge of balancing the internal resistance of the High-Side FET and Low-Side FET to achieve the best efficiency in converters.

Converter applications continuously demand components that offer both high performance and reliability, particularly to withstand increased thermal stresses. The QFN5x6 MOSFET package provides an ideal solution for these design challenges. It delivers exceptional electrical performance with low package resistance and inductance, enhancing thermal performance to meet demanding conditions. The DI101N10PQ from Diotec Semiconductor is an 100A/100V N-channel MOSFET designed to handle high current levels, reaching up to 100A. Its very low on-state resistance typically 8 mOhm significantly improves heat dissipation and boosts the power density of the MOSFET.
