

their studies.

“Reflecting on these experiences, I feel that whatever my wife and I have done for others is only a small part of what my own family once did for me. Despite having limited resources, my parents and relatives made immense sacrifices to ensure that I received a good education and had the opportunity to build a better future.”

When asked about mistakes and lessons from his career, Ganesh says he has very few regrets. He considers himself fortunate and often describes his life as blessed. While there have been moments in business where he feels certain decisions could have been made differently or sooner, he does not dwell on them. Instead, he focuses on gratitude for the opportunities he has received.

In his own words, if life were to offer him another chance to live it again, he would happily choose to repeat the same journey.

Excellence first, impact follows

Ganesh believes that the primary responsibility of any business is to build a strong and successful organisation.

“Starting a business solely to create social impact, in my view, is a misplaced priority. As a technology company, our focus should be on building world-class products, capabilities, and scale. Meaningful social impact naturally follows when we excel in what we are fundamentally meant to do,” adds Ganesh.

He also highlights the importance of this mindset in the Indian context, where there is still significant dependence on technologies developed abroad. For him, the larger mission has always been to prove that Indian companies can design and manufacture globally competitive products. Only when a business achieves such scale and excellence can it create a lasting and meaningful impact.

At the same time, Ganesh and

his organisation actively contribute to society through focused initiatives. Rather than spreading efforts thinly, they have chosen to concentrate on a single institution, the Faculty of Technology and Engineering at The Maharaja Sayajirao University of Baroda, where he studied. Over the past several years, they have invested significantly in upgrading the computer science department, modernising classrooms, laboratories, and infrastructure to create a world-class learning environment. Their contributions also extend to upgrading the institution’s auditorium, reflecting a consistent commitment to improving educational facilities.

On a personal level, Ganesh has also contributed to his village community by supporting the construction of a community hall, which has been named in honour of his grandmother, someone who deeply influenced his values and outlook on life. He maintains a clear distinction between personal contributions and corporate responsibilities, ensuring transparency in both areas.

Beyond work, Ganesh leads a balanced and active life. He is passionate about fitness, playing tennis regularly and participating

With strong dedication and a disciplined approach, Matrix has earned recognition from prestigious international design award programmes, including the Red Dot Award, Good Design Award, and Product Design Award.

in long-distance running events, including half-marathons. Professionally, his focus remains unwavering, scaling his company into a global technology leader and demonstrating that Indian engineers can build products that compete worldwide.

“Motivation does not come only from external sources—it comes from within. While inspiration can be temporary, I believe that one’s belief system and inner drive provide lasting direction. My approach to life and work is grounded in authenticity, being true to myself, doing meaningful work, and finding joy in the process,” highlights Ganesh.

Despite his achievements, Ganesh remains humble about his legacy. He does not seek to be remembered, but rather to live a fulfilling life driven by purpose. His message to future generations is straightforward: stay true to yourself, do good work, enjoy life, and strive to leave the world a little better than you found it. **EFY**
