

Powering India's Electronics Sector

Depaneling Systems from Milling, Sawing to Laser Cutting

Our depaneling systems provide precise and efficient solutions for separating printed circuit boards – whether through milling, sawing, or laser technology. Discover high-performance systems that integrate seamlessly into your production processes.

Individual Degree of Automation

Semi-automatic stand-alone machine or high-speed inline depaneling machine.

Flexible and Scalable Functions

With over 70 options, you can optimally adapt your depaneling system to your production.

Parallelization of Processes

Up to 12 stations can be integrated into the DIVISIO 6000 with rotary indexing table.

Depaneling Systems for PCB Production

Regardless of material, size or contour - our DIVISIO depaneling machines separate your PCB from the panel with a precision of up to 10 µm. Whether as a stand-alone solution, inline or offline system – we supply a machine that is perfectly tailored to your requirements and your production. In doing so, we rely on proven cutting processes such as sawing, milling or laser cutting.
