

## Powering India's Electronics Sector

### INSIGNUM 4000 GenS AI-Powered Laser Marking

INSIGNUM 4000 GenS brings intelligent laser marking to the next level: AI-supported setup, automated process optimization, and smart quality monitoring enable faster production, reduced downtime, and a clear path toward autonomous manufacturing.

- ✓ AI-supported process optimization for shorter cycle times
- ✓ Up to 50% faster setup and changeover times
- ✓ SynA intelligent assistance system for easier operation and stable processes

#### Key Facts

- \_Laser marking with AI-supported process control
- \_Automatic generation of marking positions and laser parameters
- \_Intelligent quality monitoring for stable production processes
- \_Modular and scalable platform for future-ready automation

## Generation GenS – Not Just Machines. Evolution Engines.

INSIGNUM 4000 GenS shows how artificial intelligence is transforming laser marking into an intelligent, self-optimizing process. AI-supported functions automatically generate marking positions and optimize laser parameters to reduce setup times and increase productivity. Integrated quality monitoring ensures reliable marking results and minimizes downtime. With its scalable, future-ready architecture and the SynA operator assistance system, INSIGNUM 4000 GenS is built for the Smart Factory and the next generation of autonomous manufacturing.
