

Powering India's Electronics Sector

Material Logistics Intelligent Flow for Smart Manufacturing

From magazines and trays to component reels, our material logistics solutions enable efficient, connected, and future-ready electronics manufacturing. AI-supported control, mobile robotics, and intelligent material handling ensure reliable processes, optimized line supply, and maximum material availability. With SynapticaOS, the intelligent software platform for factory orchestration, material flows and logistics processes are centrally controlled and optimized in real time.

AI-supported
material flow optimization and
predictive replenishment

Flexible AMR integration
for intelligent transport and line supply

Automated handling
of magazines, trays, boxes, and
component reels

Smart Intralogistics Adaptive, Efficient, Future-Ready

Our material logistics solutions combine automation, AI, and mobile robotics to create self-optimizing intralogistics processes for electronics manufacturing. From incoming goods and centralized storage to intelligent buffering and precise line replenishment, all systems work seamlessly together to ensure efficient material flow. AI-supported planning prioritizes transport orders, optimizes circulation materials, and improves component availability exactly when needed. With flexible AMR integration and scalable automation concepts, our solutions reduce interruptions, lower inventory levels, and create adaptive logistics processes ready for the Smart Factory.
