

PLC-Based Load Banks. Intelligent Testing, Built In.

HTR Load Banks are engineered around industrial PLC platforms with programmable load step control, automated test sequencing, and real-time HMI monitoring of voltage, current, power factor, and temperature. Every test is repeatable. Every parameter is logged. Data exports via USB for reporting and compliance. No manual intervention required. Whether you are commissioning generators, validating UPS systems, or stress-testing power electronics in production, HTR ensures precise and automated load testing.

- **Configurations:** 333W to 500kW+ | 230V Single Phase & 440 V 3 Phase
- **Formats:** Portable, lab, floor-mounted, outdoor/containerized
- **Protection (PLC-embedded):** Overcurrent, Over / Under Voltage Protection (Both in single & three phase systems), Programmable Over Temperature Protection, Fan Fail/Overload Protection, Short Circuit Protection (MCB & Fuse), 1/ 3-Phase Monitoring.
- **Cooling:** High-efficiency forced air, industrial AC fans, stainless steel tubular heating elements
- **Custom builds:** SCADA integration, programmable sequences, advanced data acquisition

Global leaders in resistor technology. Trusted in 50+ countries across power generation, data centres, and industrial testing. A proprietary mobile app enables fast resistor identification and cross-referencing across manufacturers. One company. Full-spectrum capability. From resistors to the complete PLC-controlled load bank systems.
