India's EV Registrations Rise 25% In FY26

India's EV registrations rose 24.8% YoY to 2.55 million units in FY26, up from 2.04 million in FY25. Registrations have increased sharply from 473,928 units in FY22, reflecting the rapid expansion of electric mobility. Growth is supported by government incentives, expanding charging infrastructure, and rising adoption of electric two- and three-wheelers, commercial fleets, and passenger vehicles.

Global DRAM Market Enters New Phase In Q2 2026

Samsung regained the DRAM market leadership in Q2 2026 with a 39% share, while SK hynix fell to 26% from 39% a year earlier. Micron followed closely at 25%. Rising AI demand pushed conventional DRAM prices higher, while HBM prices declined due to weaker HBM3E pricing. HBM4 shipments are expected to support price recovery, while competition intensifies as Micron and CXMT expand.

Global Semiconductor Sales Rise 35.1% In Q2 2026

Global semiconductor sales rose 35.1% QoQ to \$403.3 billion in Q2 2026. June sales reached \$134.5 billion, up 123.6% YoY and 9.7% MoM. Sales increased across all major regions, led by the Americas, Asia Pacific, China, Europe, and Japan. Global chip sales are expected to exceed \$1.5 trillion in 2026, driven by strong demand.

Global EV Thermal Management Market To Reach \$75.1B By 2033

The global EV battery thermal management systems market is projected to grow from \$7 billion in 2025 to \$75.1 billion by 2033. Rising EV adoption, larger battery packs, and fast charging are driving demand for thermal management. Both passive and active systems are expanding, with active solutions gaining importance as higher charging power increases heat generation and battery safety challenges.
