

IN SHORT

- LG Electronics India Q1 revenue climbs 15.5%, profit up 27.2%
- Entegris eyes key role in Tata Electronics' Dholera chip fab
- Micron awards L&T Phase 2 contract for \$2.75 billion India chip facility
- BSNL plans ₹770 billion investment for 4G, 5G network expansion
- TSMC plans up to 10 per cent chip price increase from 2027
- Intel boosts foundry ambitions with \$20 billion equity raise
- China reinforces Chip IP protection as tech self-reliance drive grows
- Tata Power wins SECI contract for 324MW from Maharashtra pumped Hydro project
- Nvidia to invest \$25 million in Sarvam AI's \$74 million funding round
- RRP Electronics to acquire Vital Electronics to expand EMS capabilities
- MITSUMI Distribution partners with Philips to expand display reach in India
- Vikram Solar plans \$1.9 billion expansion into cells, wafers, and batteries
- Mixx Technologies acquires Sophic Silicon, partners with Kaynes Semiconductor

L&T announces 10,000-GPU AI factory in Chennai

L&T has secured an order from Together AI to build an AI factory at its Chennai data centre campus, marking its entry into the AI infrastructure business. The facility will deploy 10,000 Nvidia B300 GPUs for AI training, inference, and fine-tuning, with the campus planned as a gigawatt-scale AI infrastructure hub.

ACME Solar secures ₹26.46 billion loan for 450MW FDRE project

ACME Solar has secured ₹26.46 billion from REC Ltd to develop a 450MW/1800MWh firm and dispatchable renewable energy project in Rajasthan. The 20-year loan will fund construction, combining solar generation with battery storage. Backed by a 25-year PPA with SJVN at ₹6.74 per unit, the project will provide four hours of assured peak power.

Juniper Green Energy sets ₹18 billion IPO to cut debt

Juniper Green Energy has opened

INTERNATIONAL news

Bosch secures \$225 million US CHIPS funding for SiC chip plant

Bosch has secured up to \$225 million under the US CHIPS programme to support its planned \$2 billion investment in a 200mm silicon carbide semiconductor facility in Roseville, California. The company has begun sample production and plans to manufacture commercial SiC chips in 2026, strengthening US supply chains for EVs, energy, and industrial applications.

AMD and Microsoft expand Azure partnership with Helios AI infrastructure

AMD and Microsoft are expanding their Azure partnership, with Microsoft adopting AMD's Helios Rackscale Solution for AI inference and cloud workloads. Helios combines MI455X GPUs, 6th Gen EPYC processors, Pensando networking, and ROCm. Microsoft will also launch new AMD-powered Azure VMs for agentic AI and semiconductor design, while expanding AMD DPU deployment.

Sony and Mitsubishi Electric to form JV for AI-powered factory automation

Sony Semiconductor Solutions and Mitsubishi Electric will establish Advanced Vision Solutions Co. in October 2026 to advance manufacturing automation. The partnership will combine Sony's image sensors and edge AI with Mitsubishi Electric's factory automation expertise to develop vision-based solutions that monitor production, quality, equipment, and maintenance data, enabling real-time automated control and reduced human intervention.

Samsung eyes €1 billion investment in Mistral AI

Samsung is reportedly considering investing up to €1 billion in French AI startup Mistral AI as part of a funding round valuing the company at about €20 billion. EQT may also participate. The potential deal comes as Europe seeks greater AI independence from US technology companies, while Samsung expands investments in emerging technologies.

Intel and AMD explore longer CPU commitments as China's AI demand surges

Intel and AMD are discussing longer-term CPU purchase agreements with Chinese server customers as AI data-centre expansion tightens processor supplies. Deals could cover one to two years or longer, with some server CPU prices rising over 10% monthly. The trend highlights growing demand for CPUs alongside GPUs, memory, and networking equipment as China expands AI infrastructure.

Iridium and SKYWAVE partner to strengthen connectivity for heavy equipment

Iridium Communications and SKYWAVE are partnering to improve industrial IoT connectivity for heavy equipment manufacturers. The solution combines Iridium's global LEO satellite network and SBD services with SKYWAVE's multi-network platform, enabling seamless satellite, cellular, and Wi-Fi connectivity. It will support remote monitoring, diagnostics, predictive maintenance, and connected fleet services in remote environments.

its ₹18 billion IPO, mainly to reduce debt. ₹6.83 billion will repay parent borrowings and ₹7.29 billion will support subsidiary debt reduction. The renewable developer had 2409MWp operational capacity and 503MWh BESS capacity as of June 2026, with a 10,247MWp portfolio.

Syrma SGS Q1 FY27 revenue jumps 67% to ₹16.04 billion

Syrma SGS Technology reported Q1 FY27 revenue of ₹16.04 billion, up 67.1% year-on-year, driven by automotive, consumer electronics, and exports. EBITDA rose 72% to ₹1.766 billion, while PAT more than doubled

to ₹1.057 billion. During the quarter, the company formed a strategic JV with Japan's KAGA Electronics to expand manufacturing and serve Japanese OEMs.

NCLAT rejects DoT's ₹469.1 million claim against Rolta India

NCLAT has dismissed the Department of Telecommunications' appeal seeking ₹469.1 million in unpaid licence fees from Rolta India, upholding the NCLT-approved resolution plan. The tribunal noted that Ashdan Properties' ₹9 billion resolution plan, approved in December 2025, had already been imple-
