

GUJARAT: Leapfrogging as a Global Hub for Semiconductor Manufacturing

Gujarat's emergence as India's semiconductor powerhouse received another significant boost with the approval of two major semiconductor projects under the Government of India's semiconductor mission. These approvals not only reinforce Gujarat's leadership in India's semiconductor journey but also strengthen the state's position as a preferred destination for advanced electronics manufacturing, semiconductor fabrication, assembly, testing, and supply chain development.

With the approval of projects by **Crystal Matrix Limited** and **Suchi Semicon Private Limited**, Gujarat's semiconductor ecosystem now comprises **six approved semiconductor projects**, including investments by **Tata Electronics (Foundry, Dholera SIR)**, **Micron Technology (Memory ATMP, Sanand)**, **CG Power and Industrial Solutions Ltd. (OSAT, Sanand)**, and **Kaynes Technology (OSAT, Sanand)**. Collectively, these projects represent cumulative investments of approximately **USD 14.7 billion** and are expected to generate nearly **50,000 employment opportunities** across the semiconductor value chain. The ecosystem spans key segments including **semiconductor fabrication, memory packaging and testing, OSAT, specialty semiconductor manufacturing, and advanced semiconductor materials**, further reinforcing Gujarat's position as the nucleus of India's ambition to establish a resilient, self-reliant, and globally competitive semiconductor ecosystem.

GSEM Welcomes India Semiconductor Mission (ISM) 2.0

GSEM welcomes the announcement of India Semiconductor Mission (ISM) 2.0 under the Union Budget 2026-27 and reaffirms its commitment to actively support and facilitate this landmark national initiative. Building on the strong foundation laid by ISM 1.0, the next phase aims to strengthen India's semiconductor ecosystem through indigenous development of semiconductor

equipment and materials, advancement of full-stack semiconductor IP, enhanced supply chain resilience, and industry-led R&D and talent development. Gujarat, with its rapidly expanding semiconductor ecosystem, looks forward to working closely with the Government of India and industry stakeholders to contribute meaningfully to the mission's objectives.

Two New Semiconductor Projects Strengthen Gujarat's Value Chain

Crystal Matrix Limited, envisions the establishment of an integrated **Compound Semiconductor Fabrication and ATMP facility in Dholera, Gujarat**, focused on the manufacturing for **Mini and Micro-LED displays**. The facility will have **Gallium Nitride (GaN) foundry services**, including epitaxy on 6-inch wafers, a critical capability for next-generation display and electronic applications.

The facility will have an annual production capacity of **72,000 square meters of Mini/Micro-LED display panels** and **24,000 sets of RGB GaN epitaxy wafers**. The project is strategically aligned with emerging global demand for advanced display technologies serving large-format televisions and commercial displays, medium-sized displays used in smartphones, tablets and automotive infotainment systems, as well as ultra-compact displays powering Extended Reality (XR) devices, smart wearables and next-generation consumer electronics.

Suchi Semicon Private Limited, promoted by Shri Ashok Mehta, will establish an **Outsourced Semiconductor Assembly and Test (OSAT) facility in Surat** focused on the manufacturing of discrete semiconductors. With a projected production capacity of **1,033.2 million chips annually**, the facility will cater to growing requirements from power electronics, analog integrated circuits and industrial semiconductor applications.

The chips manufactured at the facility are expected to serve critical end-use sectors including the automotive industry, industrial automation systems, renewable energy infrastructure, consumer electronics and various industrial applications. The project will further enhance India's packaging and testing capabilities while contributing to the localization of semiconductor supply chains. Suchi Semicon has a strategic partnership with ROHM from Japan.

Together, these projects add significant depth to Gujarat's semiconductor ecosystem by strengthening both advanced display manufacturing and semiconductor packaging capabilities, two critical segments in the global semiconductor value chain.

Creating a Complete Semiconductor Ecosystem

One of the landmark milestones in Gujarat's semiconductor journey was the **inauguration of CG Semi Private Limited's OSAT facility in Sanand by Hon'ble Prime Minister Shri Narendra Modi on 4th**
