

July 2026, marking the commencement of commercial semiconductor manufacturing operations in the state and reinforcing Gujarat's emergence as a key hub in India's semiconductor ecosystem

CG Semi is a joint venture between **CG Power & Industrial Solutions Limited (Murugappa Group)**, **Renesas Electronics Corporation** and **Stars Microelectronics**. Designed to serve diverse semiconductor markets, the facility is expected to scale progressively and achieve an annual production capacity of **five billion chips** at full capacity. It is noteworthy to mention that three Semiconductor Manufacturing facilities in Gujarat are now in commercial operation - Micron's ATMP, OSAT units of both Kaynes Semicon and CG Semi.

Several ancillary supply chain companies from Japan, Taiwan, Malaysia, Singapore and the US have already committed their investment plans for setting up their presence in the State.

Initiatives towards Workforce Development

Recognising that a strong semiconductor sector requires more than manufacturing facilities alone, Gujarat has been actively fostering collaborations across academia, research institutions and industry.

A recent milestone in this direction is the **Memorandum of Understanding between the Government of Gujarat and C-DAC Bengaluru** for establishing a **ChipIN Extension Centre and Centre of Excellence in VLSI Design at Gujarat Technological University (GTU), Ahmedabad**. The initiative aims to create a state-level hub for semiconductor design, innovation and entrepreneurship by connecting academia, start-ups, MSMEs and industry with the because necessary support and design tools.

Another key initiative in this direction is SAMARTH (Silicon & Advanced Semiconductor Manufacturing Research & Training Hub), a state-of-the-art nanofabrication facility being established at IIT Gandhinagar with support from the Government of Gujarat, Government of India, and industry partners. The hub is envisioned as a centre for hands-on semiconductor research, innovation, and workforce development, with IIT Gandhinagar.

Complementing these efforts, NIELIT is establishing a dedicated centre at ITI Chandkheda, Ahmedabad, focused on semiconductor packaging and emerging tech. Being developed in collaboration with Infineon, the centre will provide industry-oriented training in semiconductor packaging using actual wafer and die processing equipment. The initiative will feature a dedicated Centre of Excellence for Semiconductor and Advanced Manufacturing, supported by industry-aligned curricula, faculty development programmes, and hands-on learning infrastructure.

A dedicated Semiconductor packaging skilling centre is established in Pandit Deendayal Energy University at Gandhinagar. This centre supported by the Government of Gujarat and Micron, has now trained more 300 trainees with hands-on skills.

Vibrant Gujarat: Regional Summit at Vadodara

The Vibrant Gujarat platform has continued to attract strategic investments across semiconductor, electronics, renewable energy and advanced manufacturing sectors.

During Vibrant Gujarat Regional Summit, the Government of Gujarat facilitated a series of strategic partnerships aimed at strengthening the state's semiconductor, electronics, renewable energy, and advanced manufacturing ecosystem. Key initiatives include—**Fujifilm India Private Limited's** announcement regarding their plans to establish a **Semiconductor-grade Advanced Materials Manufacturing Facility in Dholera**, further strengthening the semiconductor supply chain ecosystem in the state.

The state also secured investments across critical manufacturing segments. **Ratnaveer Precision Engineering Ltd** will establish a **Copper Clad Laminate manufacturing facility in Vadodara** with a proposed investment of ₹472.34 crore, while **Aryatech Industries Pvt Ltd** will set up an **Aluminium Copper Clad Laminate facility in Ahmedabad** with an investment of ₹70 crore. **Regain Energies Solutions Pvt Ltd** is investing ₹72.42 crore in a **precision metal extraction and e-waste recycling facility in Surat**, supporting circular economy initiatives. In the renewable energy sector, **Navitas Solar Private Limited** will develop an integrated **Solar PV Cell, Module, and Ingot-Wafer manufacturing unit in Bharuch** with an investment of ₹2,368.20 crore, and **Cellora Energy Private Limited** will establish a **Solar PV Cell Line in Surat** with an investment of ₹717.76 crore.

Further strengthening Gujarat's clean energy ecosystem, **Mecpower Solution**

Ltd will set up an **Advanced Battery Energy Storage System (BESS) manufacturing facility in Vadodara** with an investment of ₹160 crore. Collectively, these investments are expected to generate substantial employment opportunities while reinforcing Gujarat's position as a leading destination for advanced manufacturing and technology-led industrial growth

Building Advanced Technology Infrastructure

Beyond semiconductor manufacturing and design initiatives, Gujarat is also supporting the growth of domestic space technology companies. A key initiative here in this direction is the development of the Space-Grade **Common Technical Facility (CTF)** at GIDC Khoraj, envisioned as a state-of-the-art shared infrastructure platform for space, electronics, and deep-tech companies. The facility is expected to provide access to critical testing, validation, prototyping, and technology development infrastructure, enabling startups, and technology enterprises to accelerate innovation and commercialization. This facility is being developed in class collaboration with INSPACe and the Department of Space, and it will be part of the larger Space Manufacturing Park.

The Road Ahead

Gujarat's semiconductor story has evolved from policy ambition to tangible execution. From semiconductor fabrication and OSAT facilities to semiconductor materials, supply-chain development, design excellence centres and component manufacturing, the state is steadily building a comprehensive ecosystem capable of serving global markets.

Gujarat is positioning itself as a trusted node on the global semiconductor supply chains. Gujarat's execution-focused approach offers a ambitious model for ecosystem-led industrial development and reinforces emergence as a global hub for semiconductors, advanced electronics and next-generation technologies.
