

CRANBERRIES

The northeast USA is a major cranberry-growing region. Cranberries grow in flooded bogs, and once harvested—often with high-tech equipment (above)—they can be eaten in pies and sauces.

MAINE

Although Maine is a large state, it is relatively sparsely populated. Early settlers were attracted to its coastline, and fishing communities gradually sprang up. To this day, fishing remains an important activity, while colorful foliage attracts tourists in the autumn.

HIGHER EDUCATION

A large number of universities are located in this region, including two of the most famous—Harvard (above) and Yale. As well as studying, students enjoy a full campus life, including taking part in sports. Links between industry and education are strong, so many high-tech companies have been established here.

Maine (above), famous for its clam chowder and lobsters (right)

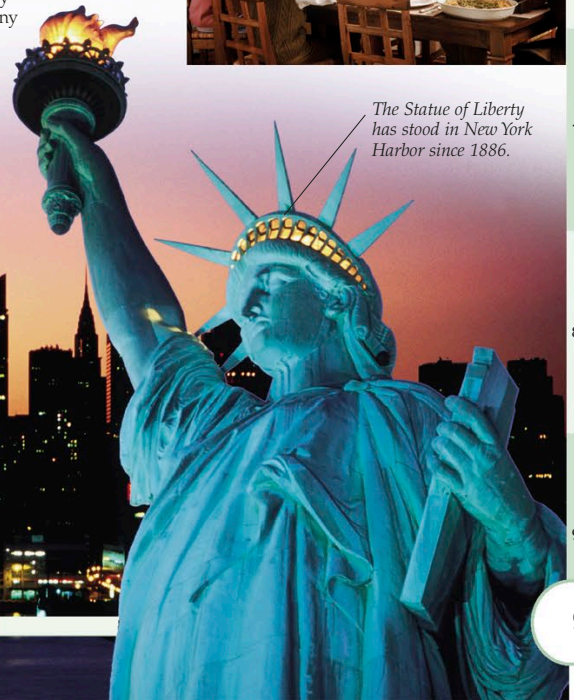

THANKSGIVING

The first Thanksgiving was held in 1621 as a gesture of friendship between American Indians and the Pilgrims after the Pilgrims' first successful harvest. Americans honor that tradition every November by gathering with family and friends to give thanks for life's blessings and to share a meal.

The Statue of Liberty has stood in New York Harbor since 1886.

NEW YORK CITY

The center of US commerce and business is New York City. People living here have a fast-paced lifestyle, and many travel by train or ferry from the suburbs to work in the towering high-rise office blocks of Manhattan. People traveling by boat across the harbor pass the Statue of Liberty, a huge monument that represents freedom and opportunity to Americans.
