

Balloon rocket

Thread string through a straw and tie it up tightly. Blow up your balloon, pinching the end closed. Tape it to the straw. Ready, steady... Let go!

Thread the string through a drinking straw.

tape

Tie up the string tightly.

balloon

When you let go, air rushes out of the balloon and pushes the balloon forward. How fast will it go?

Make a hovercraft

Stick a pop-up bottle cap onto an old CD or DVD. Pull a blown-up balloon on top. Then open the cap. Push your **hovercraft** to watch it glide along the table!

Air flows out of the balloon and through the cap. This makes an air cushion under the disc and lifts the hovercraft a tiny bit off the table.
