What happens when the colours mix?

Do you know the names of any planets?

Do your milky planets look like real planets?

Our galaxy

At night, our galaxy looks like a white starry path, so we call it the **Milky Way**.

Real planets have swirls too. These are usually huge storm clouds.

★ Swirling milk

The washing-up liquid makes the fat inside the milk move around in all directions. By adding colour, you can see the milk swirl and twirl.
