

Insect bodies

There are thousands of different types of insects, but **they all have six legs and three-part bodies.**

Most insects have **a pair of feelers** (antennae) coming out of their heads. Antennae help bugs smell, touch, and taste.

Eyes

Insects can have simple or compound eyes. Compound eyes are made up of hundreds of tiny cells that are sensitive to light.

Leg

Legs

Insects have three pairs of legs with lots of joints. They have claws at the tips for clinging to surfaces.

Exoskeleton

Exoskeleton

Insects often have hard outer casings, called exoskeletons.
