

Moth

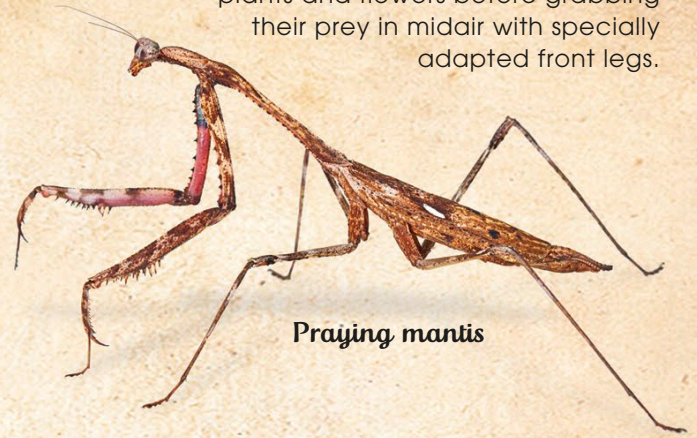

Butterfly

BUTTERFLIES AND MOTHS

With their beautiful **fluttering wings**, butterflies and moths brighten up deserts, rain forests, mountains, and even our gardens!

PRAYING MANTISES

These **sneaky hunters** wait on plants and flowers before grabbing their prey in midair with specially adapted front legs.

Praying mantis

Nearly half of all insects are beetles!

Mosquito

Fly

FLIES

These small, soft-bodied insects have two large wings for flying and two small wings for balance, allowing them to **move quickly** through the air.

Flower beetle

Mint leaf beetle

BETTERLES

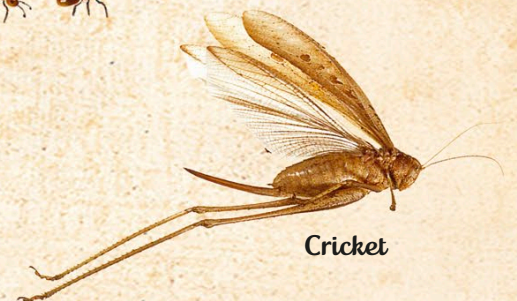

This enormous group of incredible insects lives all over the world. All beetles have hard **exoskeletons**.

Earwig

EARWIGS

Usually found in cracks and crevices, earwigs often come out at **night**. They have long, thin bodies and sharp pincers.

Cricket

GRASSHOPPERS AND CRICKETS

These noisy leapers are often spotted hopping through **grasslands**. Locusts and katydids also belong to this group.

Plant hopper

Shield bug

TRUE BUGS

Insects with **sucking mouthparts**, such as aphids, cicadas, planthoppers, and shield bugs, are known as "true bugs." They feed mostly on plants.

Cicada

Aphid

Grasshopper
