

Sea snails and sea slugs

You may already be familiar with land snails and slugs—the gastropods that live in our gardens. But some of their most fascinating relatives can be found **crawling along the seafloor and floating with the ocean currents.**

**Magnified
sea butterfly**

The sea butterfly is a **tiny sea snail**. It uses its foot, which has two winglike lobes, to fly upside down through the water.

Many marine gastropods **breathe using gills.**

SEA SNAILS

With shells that are usually coiled into spirals, sea snails come in many different shapes, sizes, and colors.

Cone snail

The slow cone snail uses **lethal venom** to stop its prey from swimming away.
