

Although they live on land, wood lice **breathe through gills**—just like their underwater relatives.

Wood louse spider

Wherever you find wood lice, you will probably find this orange spider, which **hunts and eats wood lice**.

Common wood lice

Wood lice **shed old skin** as they grow.

CRUSTACEANS

Wood lice are the only crustaceans that can spend their whole lives outside of the water. Most crustaceans are sea animals.

Lobsters

Found on the ocean floor, lobsters use their powerful claws to snatch their prey.

Crabs

These clawed crustaceans can be seen walking sideways on seashores.

Barnacles

Sticky barnacles can glue themselves to boats, rocks, and even turtles and whales!

Krill

As they drift through the ocean, krill provide food for hundreds of other sea animals.
