

Wriggle! Wriggle!

Segmented worms have two special sets of muscles, called circular and longitudinal muscles. They move along by squeezing each of these muscles in turn.

through their skin!

Giant blue earthworm

Giant blue earthworms

These huge Australian earthworms can grow to more than 10 ft (3 m) in length! They make gurgling sounds as they move.

WORMS

Segmented worms are one of three main groups of worms. Roundworms and flatworms are the two other groups.

Magnified roundworms

Roundworms

Roundworms are found just about everywhere on Earth—including inside other animals' bodies! But they are very small, so you often need a microscope to see them.

Red mangrove flatworms

Flatworms

Flatworms have soft bodies without any segments. Most of them are parasites (they live in or on other animals). The human tapeworm is a type of flatworm.
