

Many bugs are protected by an exoskeleton, a hard outer layer that covers a bug's body.

Great escape

While some bugs "play dead" when they feel threatened, click beetles somersault high into the air and out of harm's way.

Click beetle

Saddleback caterpillar

Saddleback caterpillars are covered in venomous hairs.

Hazardous hair

Many caterpillars have hairs that secrete venom. The hairs cause painful itching and irritation if enemies come into contact with them.

Roll up, roll up!

Just like wood lice, cuckoo wasps can curl themselves into protective balls when they feel threatened.
